

### **biomaterials 1980 pdf**

Biodegradable polymers and bioactive ceramics are being combined in a variety of composite materials for tissue engineering scaffolds. Materials and fabrication routes for three-dimensional (3D) scaffolds with interconnected high porosities suitable for bone tissue engineering are reviewed.

### **Biodegradable and bioactive porous polymer/inorganic**

The bone-bonding ability of a material is often evaluated by examining the ability of apatite to form on its surface in a simulated body fluid (SBF) with ion concentrations nearly equal to those of human blood plasma.

### **How useful is SBF in predicting in vivo bone bioactivity**

The phase separation of paraffinic solids from crude oil constitutes a major operating issue for the petroleum industry because the association between these wax crystals generates an extended network structure which displays features common to those of gels formed from dispersions of weakly attractive colloidal particles.
