Depending on the nature of questions asked and the pertinent time scales, there are, on the one extreme, conceptual, more inductive models, and, on the other extreme, general circulation models operating at the highest spatial and temporal resolution currently feasible.

### **Climate model - Wikipedia**

Atmospheric chemistry is a branch of atmospheric science in which the chemistry of the Earth's atmosphere and that of other planets is studied. It is a multidisciplinary approach of research and draws on environmental chemistry, physics, meteorology, computer modeling, oceanography, geology and volcanology and other disciplines.

1. Introduction. Air quality is a large concern in Europe. According to the European Environmental Agency (EEA), PM is one of Europe's most problematic pollutants in terms of harm to human health, being responsible for several hundreds of thousands of premature deaths in the European Region every year (European Environmental Agency, 2014).

### **Non-exhaust PM emissions from electric vehicles**

Abstract. The atmosphere is a carrier on which some natural and anthropogenic organic and inorganic chemicals are transported, and the wet and dry deposition events are the most important processes that remove those chemicals, depositing it on soil and water.

NOTE: The following post has led to many good comments. The best argument advanced that I am wrong is from a ~1,000 year record of CO<sub>2</sub> from the Law Dome ice core (a record I was unaware of) which suggests the recent CO<sub>2</sub> increase is almost entirely anthropogenic in origin.
