In mathematics, catastrophe theory is a branch of bifurcation theory in the study of dynamical systems; it is also a particular special case of more general singularity theory in geometry.

The below formula best describes the electrogravitational action as I see it. It is the result of a two- system variable vector magnetic potential (A), and a force constant FQK, where FQK is independent of distance, much like David Bohm's quantum Q energy potential principle.

In this work we explore two potential mechanisms inducing multiple equilibria for weakly reversible networks with mass-action kinetics. The study is performed on a class of polynomial dynamic systems that, under some mild assumptions, are able to accommodate in their state-space form weakly

Question Do you really understand the SEC's Rule 144a? What is it and why do accountants hate it? And here's the real beauty of it: Companies that issue stock under Rule 144a can access America's deep pools of capital without submitting to public-company accounting rules or to the tender mercies of Sarbanes-Oxley.
