Micronutrients: Cl, Fe, B, Mn, Zn, Cu, Mo, and Ni. The prefix "micro" is well-understood from its use in terms such as "microscope". The term "macro" is somewhat less common, but indicates objects of a somewhat large size. Intermediate sizes are sometimes indicated by "meso". For example, the fauna (animal life) of soil may be divided into macrofauna (moles, mice, etc.), mesofauna (earthworms ...

Scarcity of micronutrients in soil, feed, food, and mineral reserves – Urgency and policy options Platform Agriculture, Innovation & Society

### **Scarcity of micronutrients in soil, feed, food, and**

Soil Sources The micronutrients in the soil and their availability to plants are determined by the minerals contained in the original parent material and by the weathering processes that have taken place over the years. In general, the leached highly-weathered soils of warm, moist regions contain smaller amounts of micronutrients than soils in cool, dry regions. There are exceptions, however ...

PDF (166K) Agri-News This Week ... Two sources of readily available micronutrients exist in soil: nutrients that are adsorbed onto soil colloids (very small soil particles) and nutrients that are in the form of salts dissolved in the soil solution. Organic matter is an important secondary source of some micronutrients. Most micronutrients are held tightly in complex organic compounds and may ...
