

parallel models of human pdf

This is the first tutorial in the "Livermore Computing Getting Started" workshop. It is intended to provide only a very quick overview of the extensive and broad topic of Parallel Computing, as a lead-in for the tutorials that follow it.

Introduction to Parallel Computing

Parallel computing is a type of computation in which many calculations or the execution of processes are carried out simultaneously. Large problems can often be divided into smaller ones, which can then be solved at the same time.

Parallel computing - Wikipedia

In most connectionist models, networks change over time. A closely related and very common aspect of connectionist models is activation. At any time, a unit in the network has an activation, which is a numerical value intended to represent some aspect of the unit.

Connectionism - Wikipedia

Animal models have historically played a critical role in the exploration and characterization of disease pathophysiology, target identification, and in the in vivo evaluation of novel therapeutic agents and treatments.

The usual way of describing parallel coordinates would be to talk about high-dimensional spaces and how the technique lays out coordinate axes in parallel rather than orthogonal to each other. But there's a much simpler way of looking at it: as the representation of a data table. This one

Research: My research interests are in computer graphics, computer vision, parallel computing and human computer interaction. I have conducted a wide range of research on shape modeling/editing, texture mapping/synthesis, real-time rendering, GPU parallel computing, real-time face tracking, and 3D printing.
