Carbonyl Chemistry (12 Lectures) Aim of Course ? To build upon elements of Dr E.H. Smith's and Dr. D.C. Braddocks's course. ? To introduce the chemistry of the carbonyl functional groups. Course Objectives At the end of this course you should be able to: ? Identify the various functional groups that involve carbonyls

Chemistry of the Carbonyl Group offers organic chemistry students with the opportunity to delve deeper into this important moiety. A mechanism-heavy approach promotes real understanding over memorization, and the discussion provides sufficient detail and depth for self-teaching. Beginning simply, each new chapter adds new complexity while integrating what came before, helping students follow and work within the logic of carbonyl chemistry. Students pursuing careers in organic chemistry ...

Introduction: The functional group on aldehydes and ketones is a carbonyl group (double bond oxygen to a carbon). In aldehydes, the carbonyl group is on the "end" of a carbon chain, while in ketones, it is in the "middle" of a carbon chain.

The carbonyl carbon atom shares two of its four valence electrons with the carbonyl oxygen atom, and its remaining two electrons form two single bonds to other atoms. Formaldehyde ( $\text{CH}_2\text{O}$ ) is the simplest compound with a carbonyl group .
