These are part of a much larger range of drag anchor types which are employed by merchant ships, naval ships, fishing boats and pleasure craft, as well as for special purposes such as permanent inshore moorings.

drag of the glider is added to it, the amount of drag becomes significant. This is apparent particularly at high speeds since parasite drag increases with the square of speed. Simply put, if the speed of the glider is doubled, parasite drag increases four times. ...

Horten, on the other hand, did calculate the induced drag across the span of the wing, and in 1950 concluded that something singularly possible existed with such a spanload, although he never conclusively proved it (refs. 3, 4).

These second place winners, whose drag names were unclear, had a great commentary about the current state of dance culture. "Gender is drag. And you dragged gender roles pretty well, the toxic ones at least," said Angel Gonzales, one of the judges.

Drag is a force and is therefore a vector quantity having both a magnitude and a direction. Drag acts in a direction that is opposite to the motion of the aircraft. Lift acts perpendicular to the motion. There are many

factors that affect the magnitude of the drag.
