Their combined efforts over the next 150 years produced an understanding of the chemistry involved, resulting in greater manufacturing efficiency, a wider variety of more fragrant and colourful solid (and liquid) soaps, and milder soaps for use on the finest lace and linens. The industry thrived.

In this part of the course the main theoretical achievements in liquid state theory will be outlined. This will range from the original approach of van der Waals (1873), through the use of correlation functions to describe the properties of fluids (1950s-1980s), to the more sophisticated perturbation theories (1970s- date). The most recent developments in statistical mechanical theories which ...
