the immune system of pdf

The immune system is a host defense system comprising many biological structures and processes within an organism that protects against disease. To function properly, an immune system must detect a wide variety of agents, known as pathogens, from viruses to parasitic worms, and distinguish them from the organism's own healthy tissue.

Immune system - Wikipedia

Introduction T he immune system is a network of cells, tissues*, and organs that work together to defend the body against attacks by "foreign" invaders.

Understanding the Immune System: How it works - IMGT

The adaptive immune system, also known as the acquired immune system or, more rarely, as the specific immune system, is a subsystem of the overall immune system that is composed of highly specialized, systemic cells and processes that eliminate pathogens or prevent their growth.
