

the immune system stress pdf

The immune system is a host defense system comprising many biological structures and processes within an organism that protects against disease. To function properly, an immune system must detect a wide variety of agents, known as pathogens, from viruses to parasitic worms, and distinguish them from the organism's own healthy tissue.

Immune system - Wikipedia

Physiological or biological stress is an organism's response to a stressor such as an environmental condition. Stress is the body's method of reacting to a condition such as a threat, challenge or physical and psychological barrier.

Stress (biology) - Wikipedia

Researchers are beginning to study how our immune systems—which are connected to our brain—may affect our behavior.

Feeling Antisocial? Your Immune System Might Be to Blame

The body's immune system is made up of individual parts which work together to find and destroy bacteria, viruses and disease. Each part of the immune system must be functioning properly in order to detect and differentiate the unhealthy organisms from healthy tissues.

The Anatomy of the Immune System - The Candida Diet

The importance of the gut-brain axis in regulating stress-related responses has long been appreciated. More recently, the microbiota has emerged as a key player in the control of this axis, especially during conditions of stress provoked by real or perceived homeostatic challenge.

Stress & the gut-brain axis: Regulation by the microbiome

Stress can be brief and highly situational (heavy traffic) or persistent and complex (relationship problems, an ailing family member a spouse's death).
